

AutoCam Dashboard Collection Group Feature Enhancements

V1 10.07.2026

Introduction

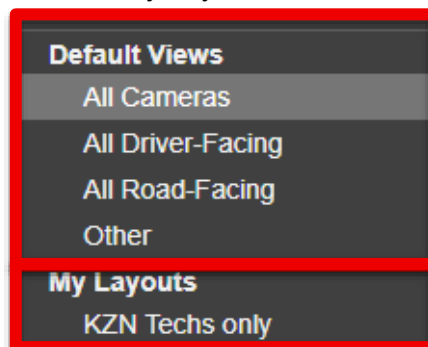

The AutoCam Dashboard Collection Group feature gives fleet managers a more targeted and configurable way to monitor vehicle camera feeds. Instead of displaying every camera view for every vehicle, users can create customised collection groups containing only the vehicles and camera positions relevant to their operational requirements.

1. Default AutoCam Collection Groups

Four default AutoCam Collection Groups are now available to simplify setup, particularly for customers managing large fleets. These predefined layouts eliminate the need to create collection groups from scratch.

- **All Cameras** – Displays every available AutoCam camera installed throughout your fleet
- **All Driver-Facing** – Displays only driver-facing camera positions for all vehicles throughout your fleet
- **All Road-Facing** – Displays only road-facing camera positions for all vehicles throughout your fleet
- **Other** – Displays all remaining camera positions, including ADAS, external cameras, and specific camera views/positions.

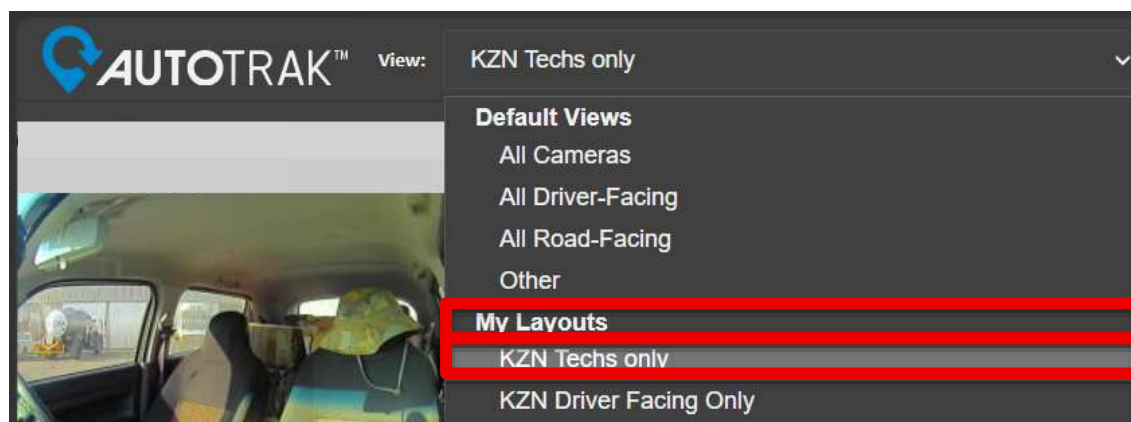

Previously created layouts remain available under My Layouts.

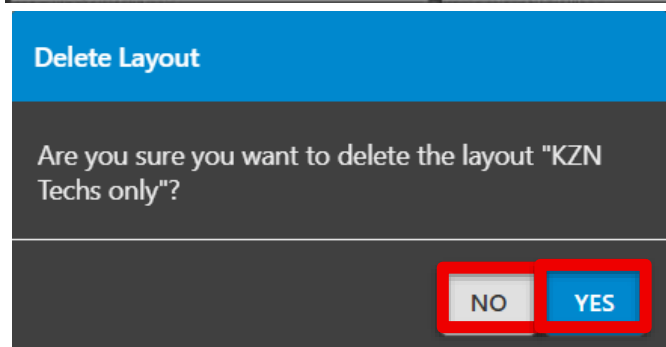

2. Manage Existing Collection Groups

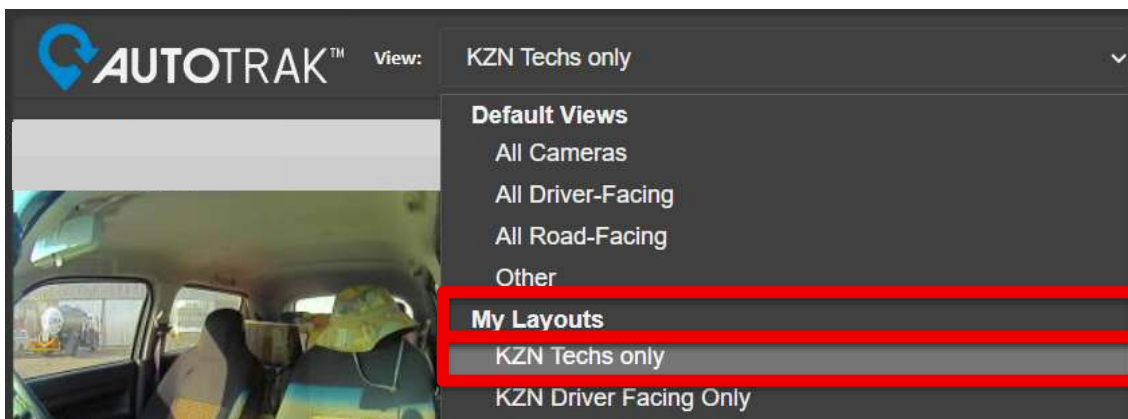

Collection Groups can be deleted, renamed, or updated.

2.1 Delete: My Layouts > Edit > Delete.

2.2 Rename: My Layouts > Edit > Rename.

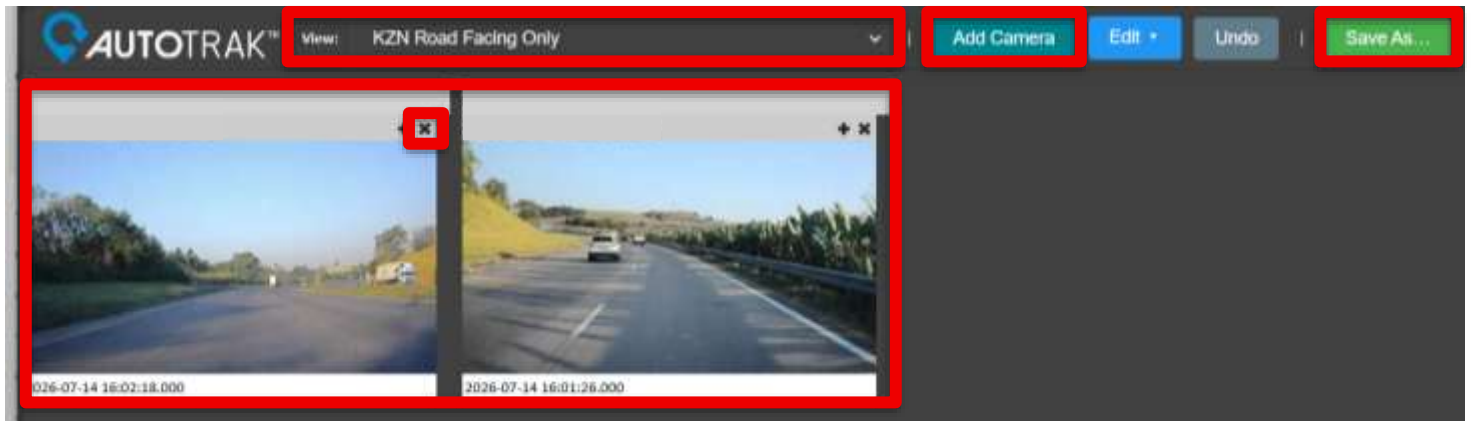

Rename Layout

Collection Group Rename Test

CANCEL RENAME

2.3 Save As: Create a new layout while keeping the original unchanged. **My Layouts > Edit/Make applicable Changes in the Collection Group Window > Save As**

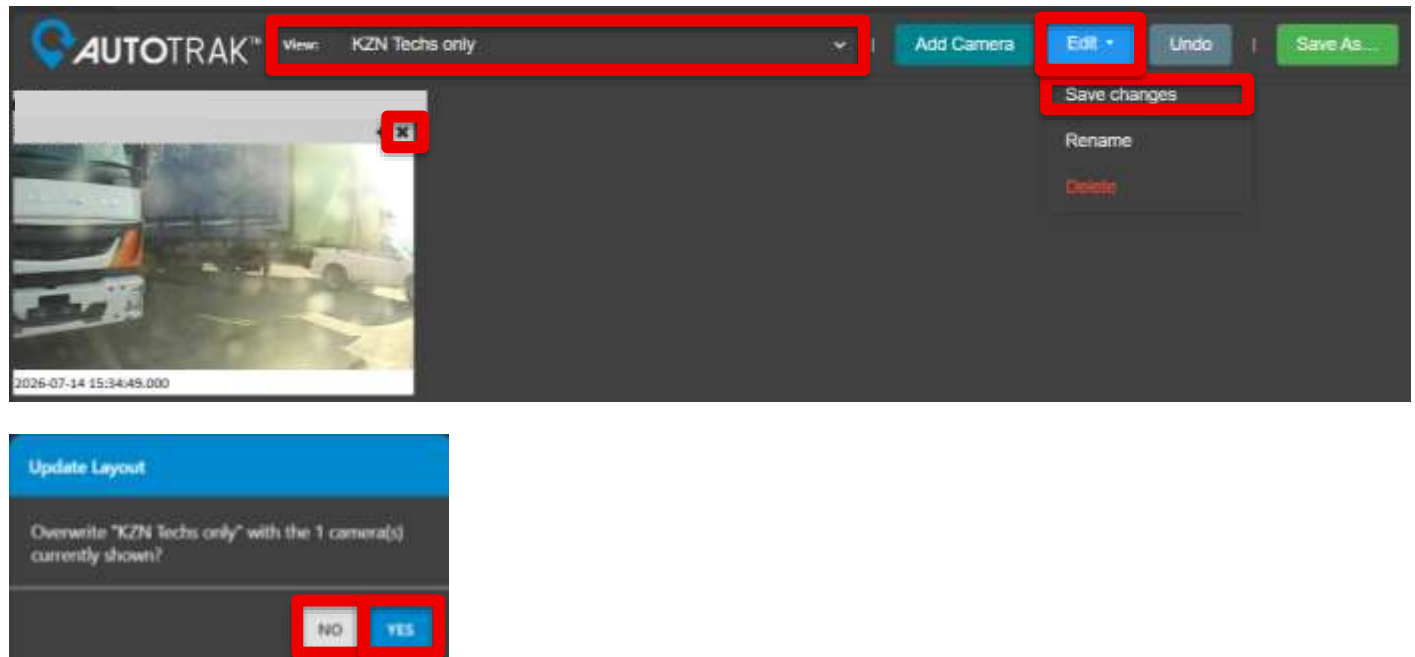

Save Layout As

CANCEL SAVE

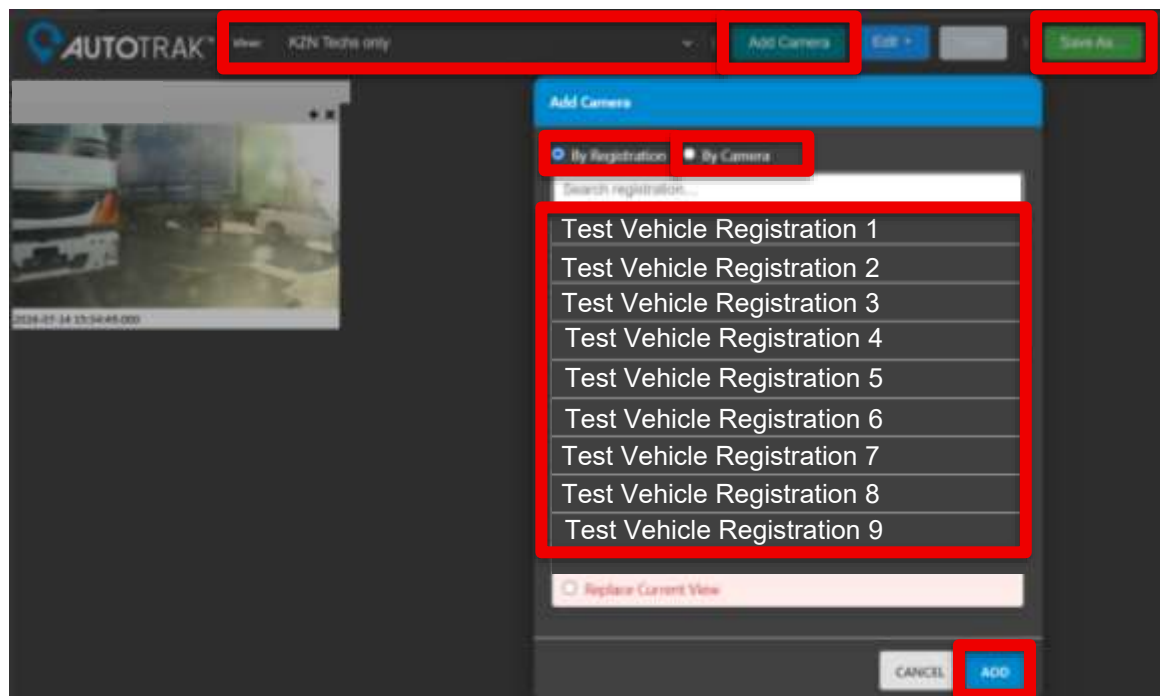

3. Edit an Existing Collection Group

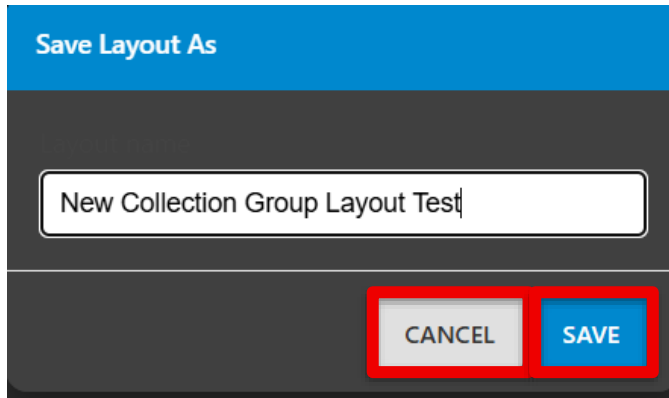

Remove unwanted camera views using the X on each camera tile, then select **Edit > Save Changes** and confirm the update.

4. Add Cameras

Use Add Camera to add cameras either By Registration or By Camera Type. After selecting the required vehicles or camera positions, click Add and then Save As to save the new collection group.

5. Undo Changes

If a camera view is removed accidentally, select Undo from the menu bar to restore the most recent change.

Need-to-Know:

- Existing layouts remain available unless deleted.
- Default layouts provide a quick starting point for customising your collection groups.
- Save As preserves the original collection group layout.
- Undo instantly restores the last removed camera view.
